higher cost of providing service, Ontario Hydro finds it to increase retail rates effective January 1, 1978 in line with the schedules in this notice. Your bills during the period on metered consumption will include a special discount reflecting the rural retail system's portion of the surplus revenue obtained by Ontario Hydro in 1977. This is the result of a number of unexpectedly favourable factors including a substantial increase in export bulk power and a reduced cost of administration, operation and maintenance. An exact amount of the total surplus will not be known until early in 1978 but if the present operating conditions remain unchanged to the end of 1977, the energy portion of your bills would be discounted by approximately 4 per cent. The net effect will be an overall average increase in rates of approximately 5.7 percent rather than 9.8 percent. Your 1978 rates based on metered consumption will be prorated from the meter reading date of your previous bill to December 31, 1977 and the new rates in this notice thereafter.
